

# JET URRT

## Upset Recognition and Recovery Training for corporate jet operations.

Improve your flight skills with in-aircraft training to recover from, Loss of Control in flight, the number one cause of fatal accidents.

Learn recovery techniques to lower the risk of total hull loss and most importantly *save lives*.

Commercial jets and turbo-props have unusual attitude response characteristics that cannot be replicated in simulators. Safe recovery from an in-flight loss of control requires specialized training in an aircraft which performs similarly to most corporate aircraft.

North American Sabreliner and Aermacchi Impala:  
Designed to endure upset training while performing  
similar to your normal business jet.

The Flight Research, Inc. URRT training- a comprehensive training program designed to prepare pilots to safely recover from all in-flight conditions.

### INSTRUCTOR HIGHLIGHT:

**Bill Oefelein**  
FAA DER Flight Test Pilot  
Commander, USN RET  
Space Shuttle Pilot

### ACADEMICS ~ 8HRS:

Aerodynamics and Limitations  
Energy Management and  
Lift Vector Control  
Maneuver Toolbox  
Upset Specific Techniques  
Case Studies

### FLIGHT ELEMENTS ~ 4HRS:

Pre and Post Flight Brief  
Advanced Handling Flight  
Advanced Upset Flight  
URRT Principals
